

75% of SMEs have experienced a cyber attack in the last 12 months. When this happens to you, what will you do?

Cyber Expert is our cyber consultancy service, helping SMEs survive a loss of personal data, or testing and preparing their systems to prevent a data breach.

After The Event Consultancy Services

If an SME client has an incident, such as a data breach, but doesn't have any cyber insurance such as our Cyber Recovery Insurance, our Cyber Experts can provide an after the event consultancy service to get them back on track. The service will be subject to a consultancy fee which will be agreed with the client upfront.

Support and Assistance for Other Cyber Policies

If an SME client has an indemnity-only cyber liability policy, without any additional practical assistance or expert help provided by the insurer, the indemnity under the policy can be used to pay for the services of our Cyber Experts, on a consultancy basis, to help get the client back in business as quickly as possible.

IT and Cyber Security Risk Assessment

For businesses looking to improve their cyber and IT security, we can provide risk management advice for businesses to test the robustness of their systems. We'll ensure peace of mind through a range of specialist cyber security consultancy solutions, protecting businesses from cyber threats, cyber attack, internal threats and business outages.

Risk Assessments can be tailor made to suit your requirements, including:

A plan of attack: Using just a company name, we can build an in depth report and plan of attack against your systems, providing insight to your internal networks, details for a spear phishing attack or potential login credentials to your infrastructure.

Creation of information security policy and procedures:

We can help your company demonstrate you have the right security practices in place by helping you achieve certification against international recognised security standards, such as ISO27001, Cyber Essentials and PCI DSS. This includes developing the policies, procedures and practices required to protect your businesses.

Virtual Security Officer: Our experts can provide a 'Security Officer' to businesses in critical roles around risk, audit, data, security and information management. A bespoke managed information security service with all the expertise a business needs without the full time member of staff.

Vulnerability and penetration testing:

This will simulate an attempted breach to your infrastructure, using real world techniques to identify key system vulnerabilities and weaknesses.
